

# ADE Flooring

## LVT Floors

LVT floors, short for Luxury Vinyl Tile, are vinyl coverings that offer a combination of durability, design, and stand out for their ease of maintenance. LVT floors achieve surfaces that mimic wood or marble, thanks to coordinated grain patterns and textures. These floors provide an economical and low-maintenance alternative, allowing the recreation of warm and natural environments. Due to their variety of sizes, they can be installed in different settings and for various uses.

# Product advantages

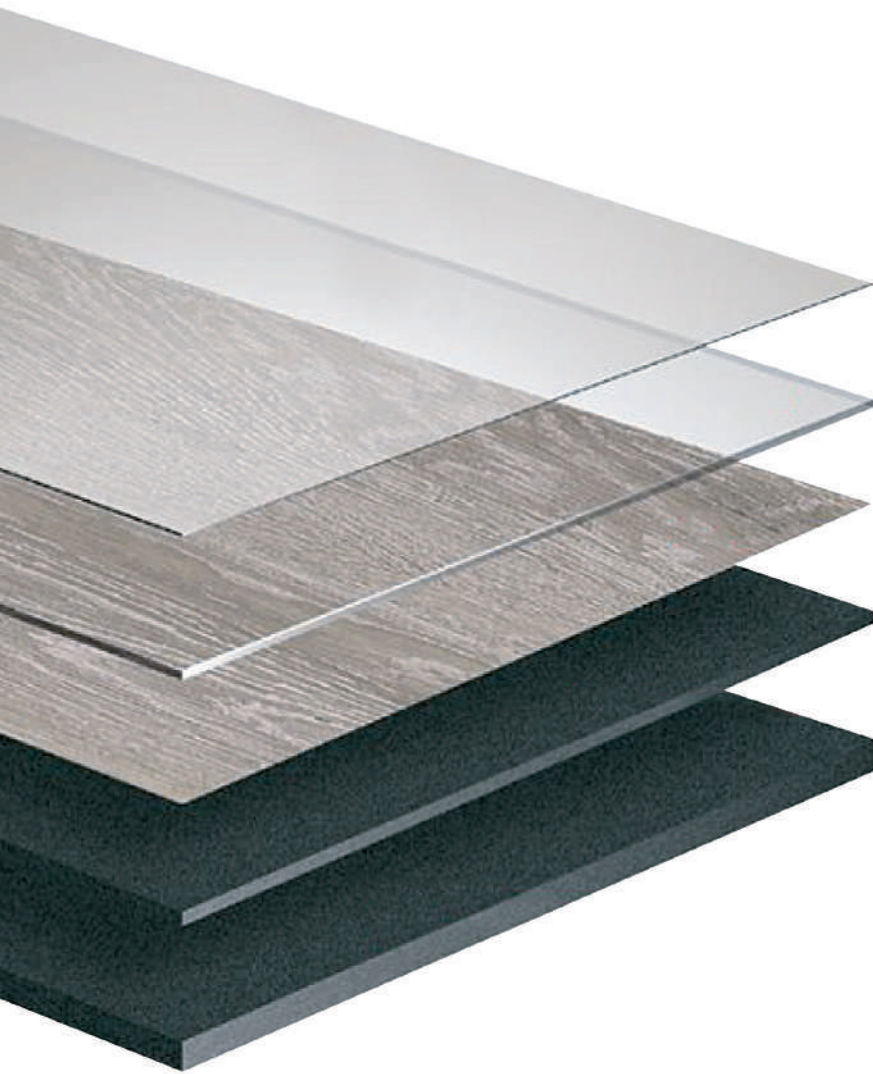

1 | Its variety of wood, or marble-like designs and finishes allows great flexibility to adapt to different decorative styles.

2 | The wear layer technology provides a product that is resistant to scratches and stains, making it suitable for high-traffic areas. Additionally, the wear layer extends its lifespan.

3 | LVT floors are water-resistant; they do not warp or get damaged when exposed to water, making them ideal for humid areas such as kitchens and bathrooms.

4 | Its surface is soft and warm to the touch compared to materials like stone or ceramic, providing a more comfortable surface to walk on.

# Product composition

## UV coating

This UV coating acts as a protective layer, helping to prevent premature wear of the LVT flooring, such as discoloration and damage caused by exposure to sunlight and other environmental elements.

## Wear layer

It is the top layer designed to resist wear caused by daily use, friction, and other factors. In LVT flooring, the wear layer is the transparent, durable element applied over the decorative layer.

## Decorative layer

This layer is responsible for providing the visual appearance of the floor and can simulate the look of natural materials such as wood or stone.

## Core

This layer provides stability to the LVT flooring. Made from virgin materials, it offers optimal stability and adequate support during installation.

## Backing layer

Made from materials that provide stability to the floor, it offers moisture resistance and helps prevent moisture absorption from the subfloor.

## International certification

CE Test Certificate

Floor Score certificate

Test Report SVCH

FSC (Forest Stewardship Council) certificate

ISO 9001

ISO 14001

ISO 45001

# Uses or applications

Schools, Hotels, Residential Buildings, Commercial Buildings, Offices, Supermarkets, Hypermarkets, Restaurants, Airports, Gyms, Hospitals.

# LVT Floors FOREST

Designed in different thicknesses, thus adapting to the different needs or requirements of the environment. Some advantages of this type of floor in particular are that it mimics the finish of traditional Wood floors, allowing for different designs, colors, and finishes.

# LVT Floors MARMOL CITY

Marble is a natural stone known for its beauty and elegance, thanks to which SPC flooring can be manufactured in different thicknesses, thus adapting to the different needs or requirements of the environment. Some advantages of this type of floor are that it mimics the finish of marble, as well as its beauty and elegance without the high cost that real marble represents. Its versatility allows for different designs, colors, and finishes.
